

Uncertain Terms

Arizona's abortion rate of 15.2 per 1,000 women (2008) is below the national rate of 19.6, according to the U.S. Census Bureau. Figures represent legal abortions for females ages 15 to 44.

	Lowest Rates
Wyoming	0.9
Mississippi	4.6
Kentucky	5.1
South Dakota	5.6
Idaho	6.0

	Highest Rates
New Jersey	31.3
Delaware	40.0
New York	37.6
Maryland	29.0
California	27.6

Enacted with little fanfare, Arizona's wrongful birth/wrongful life law protects physicians from lawsuits from patients who give birth to disabled children.

DOCTOR'S DISCRETION

choice of
knowing...”

—WENDY WRIGHT

The new cell-free fetal DNA testing prevents genetic defects such as Down syndrome, without increasing the risk of miscarriage. It also associates diagnostic tests with the frequency of errors. The test, which Romero performed about a year ago, offers a 98 percent accuracy in uncovering genetic defects such as chromosomal abnormalities, including trisomy 13 and trisomy 18. “It’s a very accurate test,” says Wright, adding that doctors often use it to determine if a fetus has a one-in-13,000 chance of delivering a Down syndrome baby, according to the American Academy of Family Physicians.

Romero says the law offers room for disputes, Marchoan says.
